## **Climbing Wall Equipment Inspection – Training**

A one-day course providing appropriate training for the inspection of equipment used at climbing walls. This is to include equipment used by climbing wall personnel and clients during recreational climbing activities as well as equipment used by personnel during maintenance and inspection operations.

### **Content:**

- Relevant legislation
- Sample Procedures
- Inspect climbing wall equipment and record findings
- Inspect access equipment used by inspectors to complete inspections of installed equipment
- Written Multiple-choice questions

### **Equipment included:**

- Climbing Ropes
- Climbing Harnesses
- Belay devices
- Karabiners
- Helmets
- Quick draws & slings (soft components)
- Back-up Devices, Ascenders & Pulleys
- Maillon Rapides

This certificate shows that competence was demonstrated on the day of attendance and is designed to support the candidate's employers climbing wall inspection procedure. Competence must be maintained by active participation in inspections, equipment evaluations and personal professional development. It is recommended that inspection experience is recorded. Employers should ensure that procedures are followed and that inspectors are involved in regular equipment inspections, continual development and performance appraisals. Manufacturer's inspection criteria and guidelines should be consulted for further details.
